## OBJECTIVE

Software developer interested in web development data science and cyber security.

## Language

Arabic(native)        English(B1)        French(A1)

## SKILLS

### Technical Skills

| HTML | Data Analysis | Command line |
| --- | --- | --- |
| CSS | Pandas | Git and GitHub |
| JavaScript | NumPy | Data structure |
| Python | Matplotlib | Algorithms |
| SQL | Machine Learning | UX |
| Flask | Deep learning | OS |
| Django | Data Science | Networks |
| MongoDB | TensorFlow | Cyber security |
| jQuery | torch | Probability |
| bootstrap | NLP | Mathematics |
| react | nltk | |
| | spacy | |

### Soft Skills

- Teamwork
- Leadership

## EDUCATION

**Bachelor of Computer Science & Mathematics**, Helwan University                 2021 – present

## EXPERIENCE

**Helwan university**
I am a student in Helwan university, and I made some experience in AI machine learning and NLP.

**Digital Egypt Pioneers Initiative - DEPI · Internship**　　　　　　　　　　2024 – present
I am studying CNNA cisco networking, English, soft skills.

**FreeCodeCamp**　　　　　　　　　　　　　　　　　　　　　　　　　　2022 – 2024
**I** took many certifications in data analysis and responsive web design and python.
**See_all_certfication**

## PROJECTS

- **Tytopya project:** text summarization project and chatbot development includes login data base management (ORM) handling errors page and admin page. I used TensorFlow torch and t5-large transformer for models. and I used html CSS JS and bootstrap for UI and flask for backend **(see repo)**

- **Chart:** e-commerce chart using html , CSS , JavaScript & local storage. **(see_repo) (demo)**

- **Skills app:** simple app to understanding flask SQL alchemy and login manger. (see repo)

- **Add notes:** simple app to understanding flask SQL alchemy and login manger with blueprint module. (see repo)

- **Insurance app:** regression project to predict the cost of insurance depend on features. (see video demo)

- **Booking system:** this app allows you to register data and use CRUD operations using tkinter and SQLite in python. (see repo)

- **Tic tac:** play tic tac game with your friend using JavaScript. (see repo) (demo)

- **Product management system:** you can put your products with sale tax and counts and make CRUDS operations using local storge and JavaScript. (see repo) (demo)

- **House pricing:** regression project predicts the cost of houses. (see notebook)

- **Heart disease:** classification project predicts if the person has heart disease. (see repo)

- **Demographics data analysis:** answers some questions about the data. (see repo)

- **Image editor:** images filter using JavaScript and FileReader class. (see repo) (demo)

- **Bondi template:** bootstrap design**.** (see repo) (demo)

- **Responsive dashboard:** contains responsive nav and tables using html and CSS. (see repo) (demo)

- **Elzero template:** template using html and CSS contains animation. (see repo) (demo)

- **Hangman:** hangman game logic with JavaScript. (see_repo) (demo)

- **Stopwatch:** react project using usestate and useeffect hocks and tailwind. (see_repo)

- **El Badr marble:** data base design for a company . **(see repo)**
